

**CLAIM LISTING**

1. (Previously Presented) Apparatus for scanning an image and printing copies of the image on a sheet, the apparatus comprising:
  - a scan module;
  - a print module;
  - an input device for allowing a standard photo size to be selected; and
  - means for causing the scan module to scan the image from an original of any size, the means automatically determining an actual size of the scanned image and scaling copies of the scanned image to the selected photo size, the means also causing the print module to print the copies of the scanned image on the sheet.
2. (Previously Presented) The apparatus of claim 1, wherein the input device also allows a Photo Package entry to be selected, wherein the Photo Package entry has a preset number of copies of a selected size, and wherein the means causes copies of a different photo size to be printed on an additional sheet when the Photo Package entry is selected.
3. (Original) The apparatus of claim 1, wherein the means also rotates at least one copy to utilize maximum printable area on the sheet.
4. (Original) The apparatus of claim 1, wherein the input device prompts for different standard photo sizes.
5. (Previously Presented) The apparatus of claim 1, wherein sets of standard photo sizes are programmably stored in the means.
6. (Previously Presented) Apparatus for scanning an image and printing copies

of the image on a sheet, the apparatus comprising

a scan module;

a print module;

an input device for allowing a standard photo size to be selected; and

a controller for causing the scan module to scan the image from an original of a plurality of sizes, the controller automatically determining actual size of the scanned image, generating scanned image copies that are scaled to the selected photo size and that are positioned to utilize maximum printable area on the sheet, and causing the print module to print the copies on the sheet.

7. (Original) The apparatus of claim 6, wherein the apparatus is an All-in-One machine.

8. (Original) The apparatus of claim 6, wherein the input device also allows a Photo Package entry to be selected, and wherein the controller causes the scan module to print copies of a different photo size on an additional sheet when the Photo Package entry is selected.

9. (Original) The apparatus of claim 6, wherein the input device prompts for additional standard sizes.

10. (Currently Amended) An article of manufacture for an apparatus including a scan module, a print module, an input device, a display device, and a processor, the article comprising:

computer memory; and

a program stored in the computer memory, the program, when executed, being operable to commanding the processor to display a Photo Features entry on the display device; the program commanding the processor to command the scan module to perform a pre-scan when the Photo Features entry is selected via the input device;

the program, when executed, being further operable to commanding the processor to automatically determine actual size of an output of the scan module after

the pre-scan is performed; command the scan module to perform a full scan; generate scaled copies of an output of the scan module after the full scan is performed, the copies being scaled to a size indicated by the selected entry;

the program, when executed, being further operable to commanding the processor to rotate the copies ~~if necessary~~ to utilize ~~maximum~~ a greater printable area on the sheet; and cause the print module to print the copies on the sheet.

11. (Currently amended) The article of claim 10, wherein the program, when executed, is operable to commands the processor to display a Photo Package entry having a plurality of sets of photo sizes on the display device, and wherein the controller causes the ~~scan~~ print module to print copies of a different size on an additional sheet when the Photo Package entry is selected via the input device.

12. (Previously Presented) The apparatus of claim 1, wherein the means causing the print module to print the copies of the scanned image on the sheet uses a single resolution for printing photos.

13. (Previously Presented) The apparatus of claim 1, wherein the means causing the print module to print the copies of the scanned image on the sheet uses a single resolution for printing photos and mixes color dots to create colors

14. (Previously Presented) The apparatus of claim 4, wherein the prompts for different standard photo sizes correspond to maximum printable area on a sheet.

15. (Previously Presented) The apparatus of claim 4, wherein the standard photo sizes are in metric units of measure.

16. (Previously Presented) The apparatus of claim 4, wherein the standard photo sizes are in English units of measure.

17. (Previously Presented) The apparatus of claim 1, wherein the original is a

photograph.

18. (Previously Presented) The apparatus of claim 1, further comprising a computer attached to the print module, the computer further comprising:

a microprocessor; and

a memory, the memory further including a program stored therein for causing the computer to display a virtual console.

19. (Previously Presented) The apparatus of claim 1 wherein the apparatus is a digital copying machine.

20. (Previously Presented) The apparatus of claim 6, wherein the print module prints copies of the scanned image on the sheet using a single resolution for printing photos.

21. (Previously Presented) The apparatus of claim 6, wherein the print module prints copies of the scanned image on the sheet using a single resolution for printing photos and mixes color dots to create colors.

22. (Previously Presented) The apparatus of claim 6, wherein the input device includes a set of entries for different standard photo sizes corresponding to maximum printable area on a sheet.

23. (Previously Presented) The apparatus of claim 6, wherein the selected photo sizes are in metric units of measure.

24. (Previously Presented) The apparatus of claim 6, wherein the selected photo sizes are in English units of measure.

25. (Previously Presented) The apparatus of claim 6, wherein the original is a photograph.

26. (Previously Presented) The apparatus of claim 6, wherein the controller is part of a computer system communicatively coupled to the print module and the scan module, the computer further comprising a memory including a program stored therein for causing the computer to display a virtual console.

27. (Previously Presented) The apparatus of claim 6, wherein the input device is a computer display.

28. (Previously Presented) The apparatus of claim 6, wherein the input device is a computer display of a virtual console.

29. (Previously Presented) The apparatus of claim 6, wherein the apparatus is a digital copying machine.

30. (Previously Presented) The article of claim 10, wherein the controller causes the print module to print copies at a single resolution when the Photo Package entry is selected.

31. (Currently Amended) The article of claim 10, wherein the program, when executed, is operable to produces prompts at the input device that include entries corresponding to maximum printable area on a sheet.
